Product Datasheet

Clean Room Syringe Carrier

Stainless steel construction ensures this carrier can be used in a clean room environment or where high levels of cleanliness are required. The design incorporates a butterfly lock to prevent accidental opening of the carrier when in transit. The handle is tall making the lid easier to open and close.

The lid also has a return lip which sits on the back of the carrying box body to prevent the box from falling backwards and keeps the lid in an upright position.

Key Features

- Lead Shielding Options
